# “LLMs are Powerful... but Not Perfect”

**LLMs have made huge strides. Today, they can:**

-  Craft poems and stories
-  Summarize complex information
-  Solve math problems
-  Write and debug code

**But they still face serious challenges...**

*(Especially when it comes to grounded reasoning on semi-structured and temporal data)*

 *Let's take a look at how they perform on temporal tabular QA...*

Yohan Blake's Medal Record:		
Olympic Games		
Medal	Year	Format
Gold	2012 London	4×100 m relay
Gold	2016 Rio de Janeiro	4×100 m relay
Silver	2012 London	100 m

## Problem

Q. In which city did Yohan Blake win his first medal?

**LLM's Answer: Beijing.** In 2006, Yohan Blake won his first medal at the World Junior Championships in Beijing, where he secured a Gold in the 4x100 m relay and a Bronze in the 100 m.

**Correct Answer: Bacolet**

# TakeAway

**Introduced TEMPTABQA-C**, a synthetic dataset for **precise and controlled evaluation** of temporal tabular reasoning across **diverse and complex scenarios**.

**Analyzed the limitations of direct prompting**, including reliance on **memorization**, sensitivity to **table size**, and difficulty with **multi-step and counterfactual reasoning**.

**Proposed a symbolic intermediate representation**, enabling LLMs to **generate and execute SQL queries** on structured schemas, enhancing **interpretability**, reducing **biases**, and improving **generalization**.

# TEMPTABQA-C Generation

In order to evaluate this problem we developed  
**TEMPTABQA-C** a large-scale benchmark to test  
Temporal Tabular Reasoning in LLMs

# TEMPTABQA-C Example Questions

## Easy (Simple Lookup):

- List all the formats in which Michael Phelps has won medals.

## Medium (Temporal Arithmetic):

- How old was Michael Phelps when he won his first Pan Pacific Championships ?

## Hard (Complex Multi-hop Analysis):

- What is the shortest time span (in years) within which Michael Phelps won all 3 medals (gold, silver, and bronze) in the same event?

## Direct Prompting

### Question

Q. In which year did Áron Szilágyi achieve his personal highest number of gold medal wins?

Correct answer: 2022

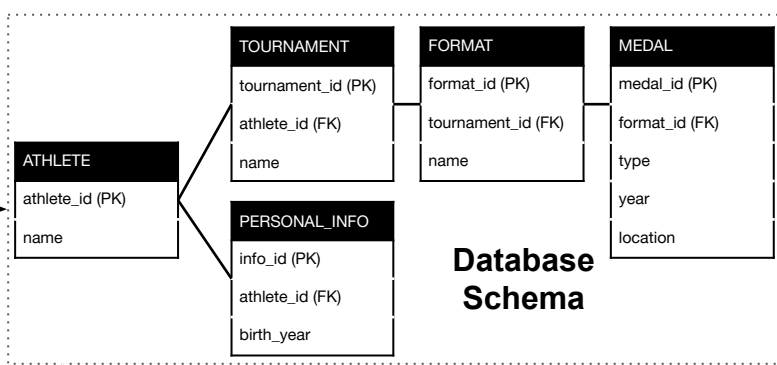

### Direct prompt (Chain-of-Thought) — Wrong

In 2020, Áron Szilágyi won a Gold Medal in the Individual format at the Tokyo Olympics. This was his most successful year in terms of highest Gold Medal wins since he did not win multiple Gold Medals in any other format or competition.

Predicted answer: 2020 ✗ (Wrong)

**Q. In which year did Áron Szilágyi achieve his personal highest number of gold medal wins?**

LLM

**Symbolic  
Integration**

```

WITH gold_medal_counts AS (
  SELECT m.year, COUNT(m.medal_id) AS gold_medals
  FROM Medal m
  JOIN Format f ON m.format_id = f.format_id
  JOIN Tournament t ON f.tournament_id = t.tournament_id
  JOIN Athlete a ON t.athlete_id = a.athlete_id
  WHERE a.name = 'Áron Szilágyi' AND m.type = 'MedalGold'
  GROUP BY m.year)
SELECT year
FROM gold_medal_counts
WHERE gold_medals =
(SELECT MAX(gold_medals) FROM gold_medal_counts);
  
```

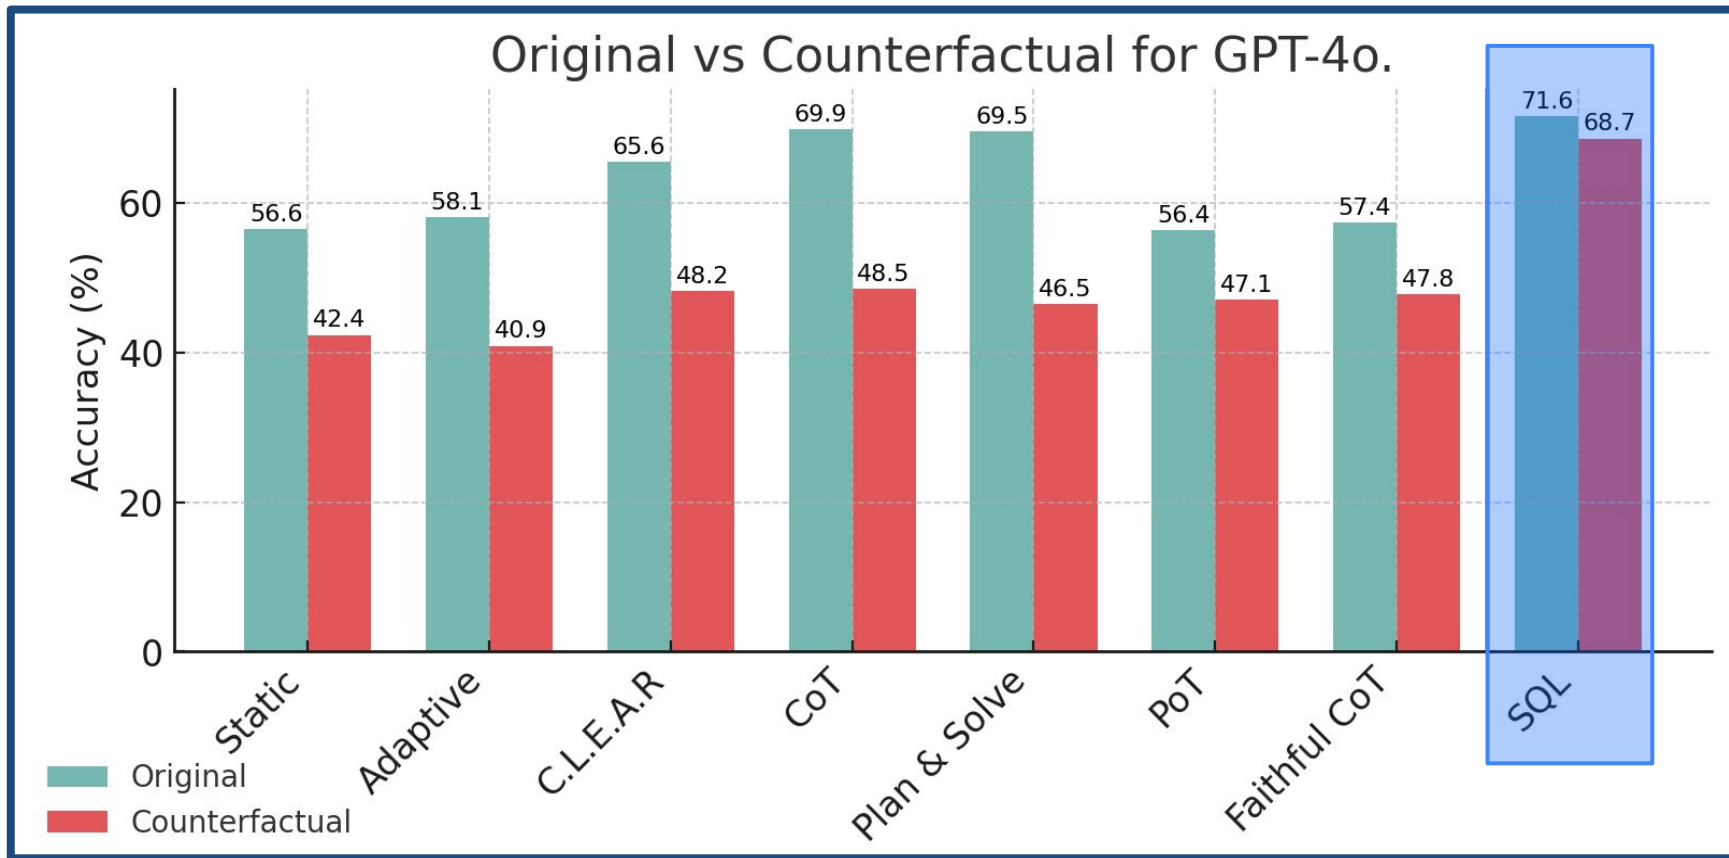

Execute

Answer: 2022

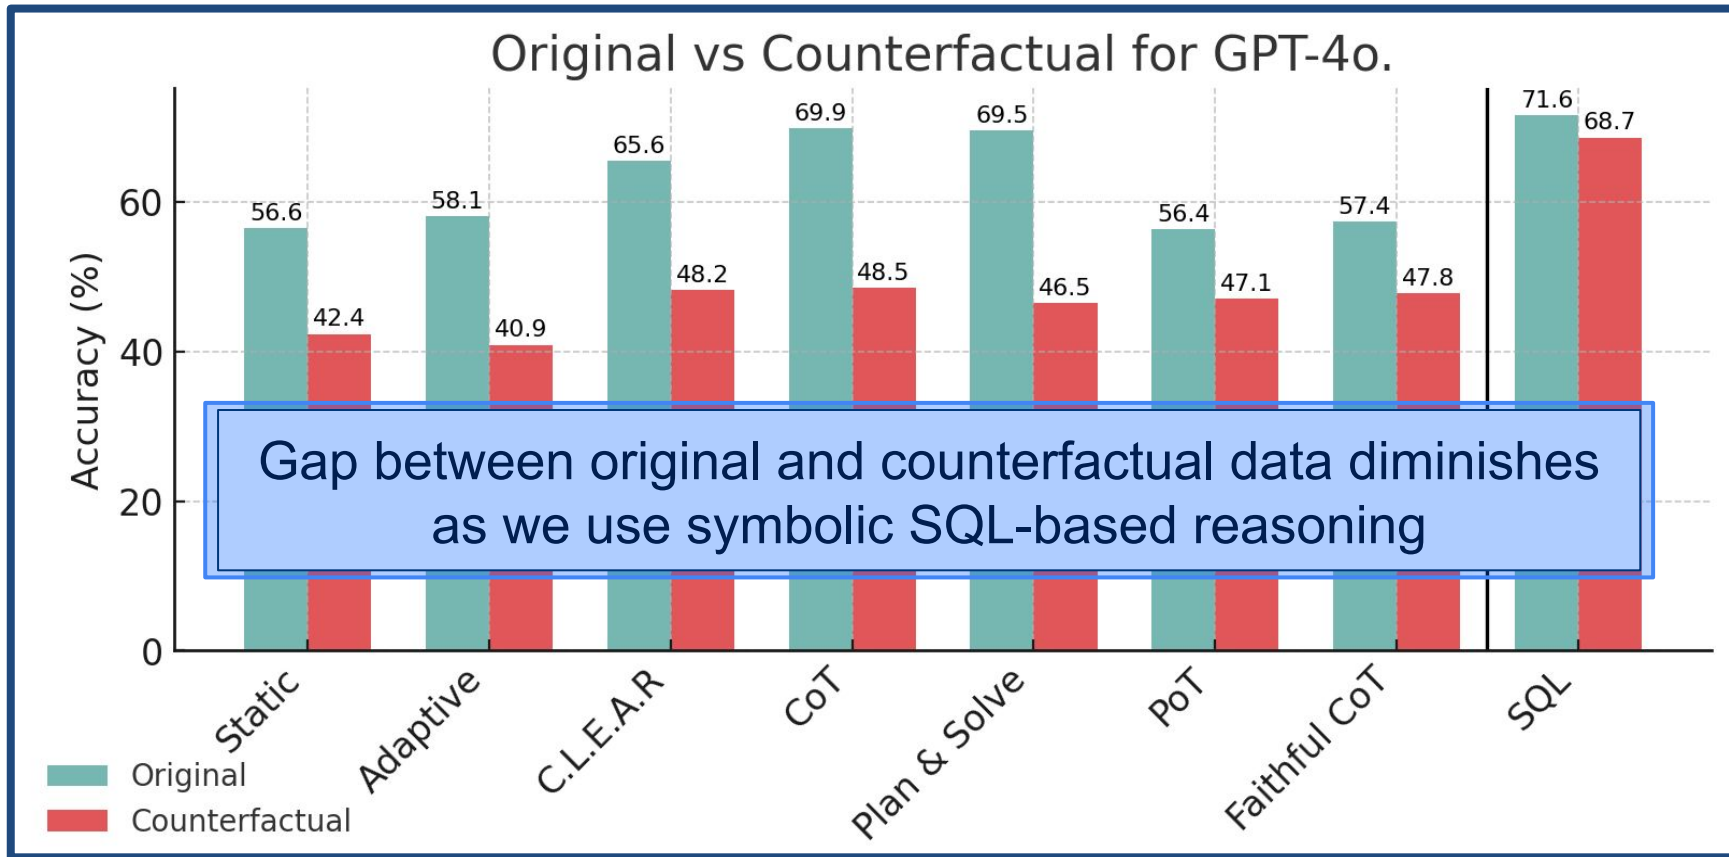

# Results

**A model that truly reasons about data should not be affected by the origin of the data.**

A model that truly reasons about data should not be affected by the origin of the data.

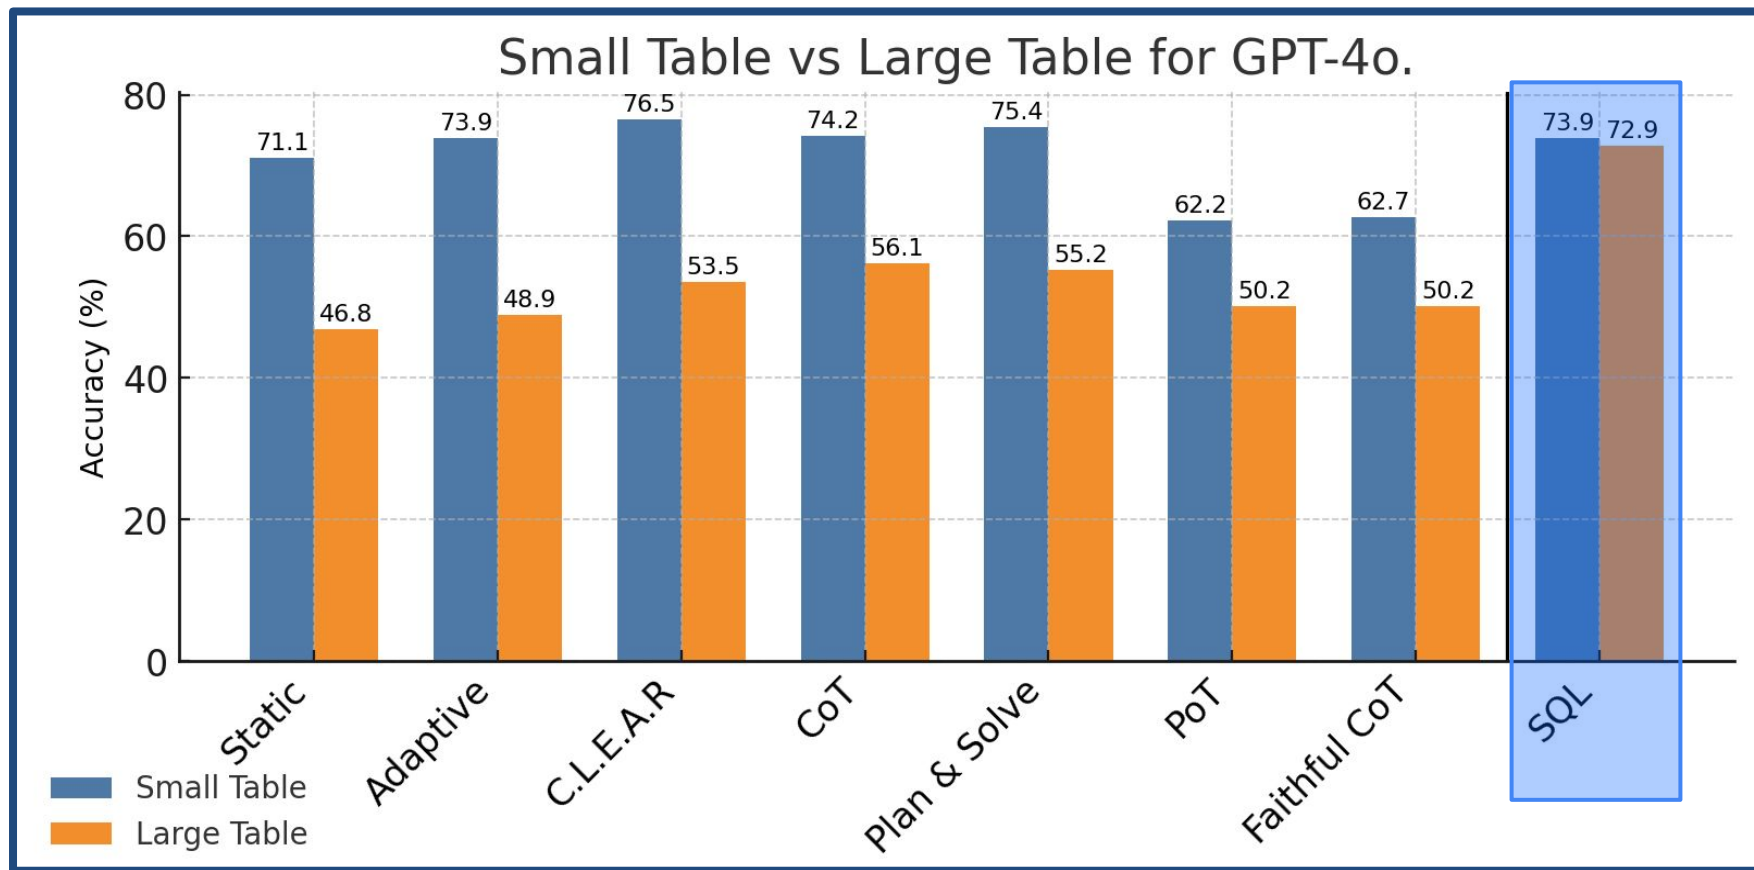

A model that truly reasons about data should not be affected by the origin of the data.

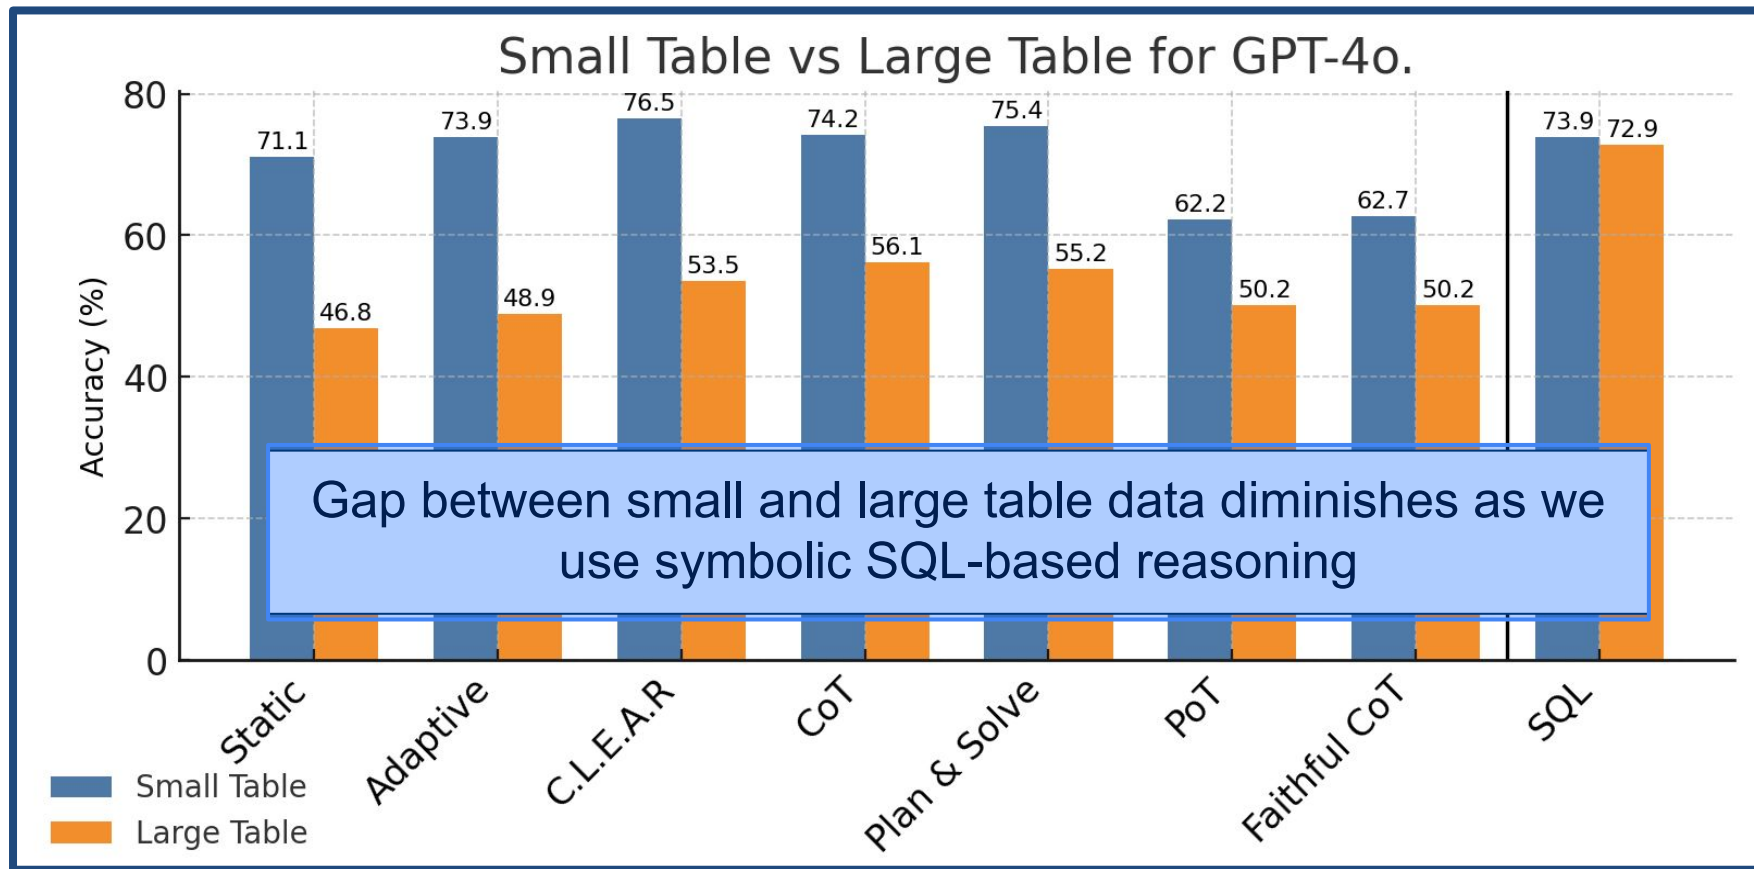

**A model capable of genuine reasoning should operate independently of data size.**

Model capable of right reasoning should operate independently of data size.

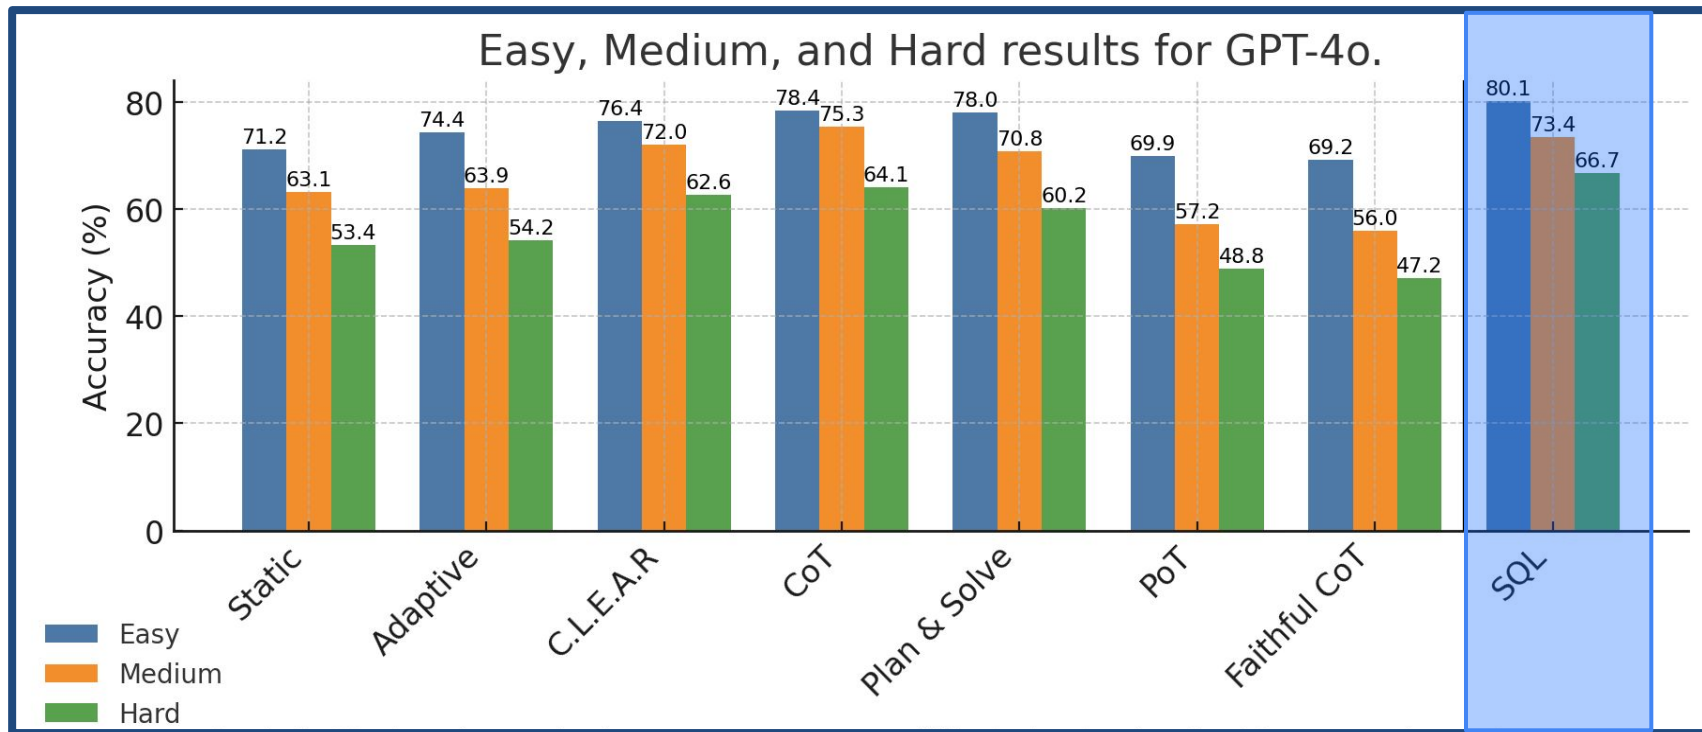

Model capable of right reasoning should operate independently of data size.

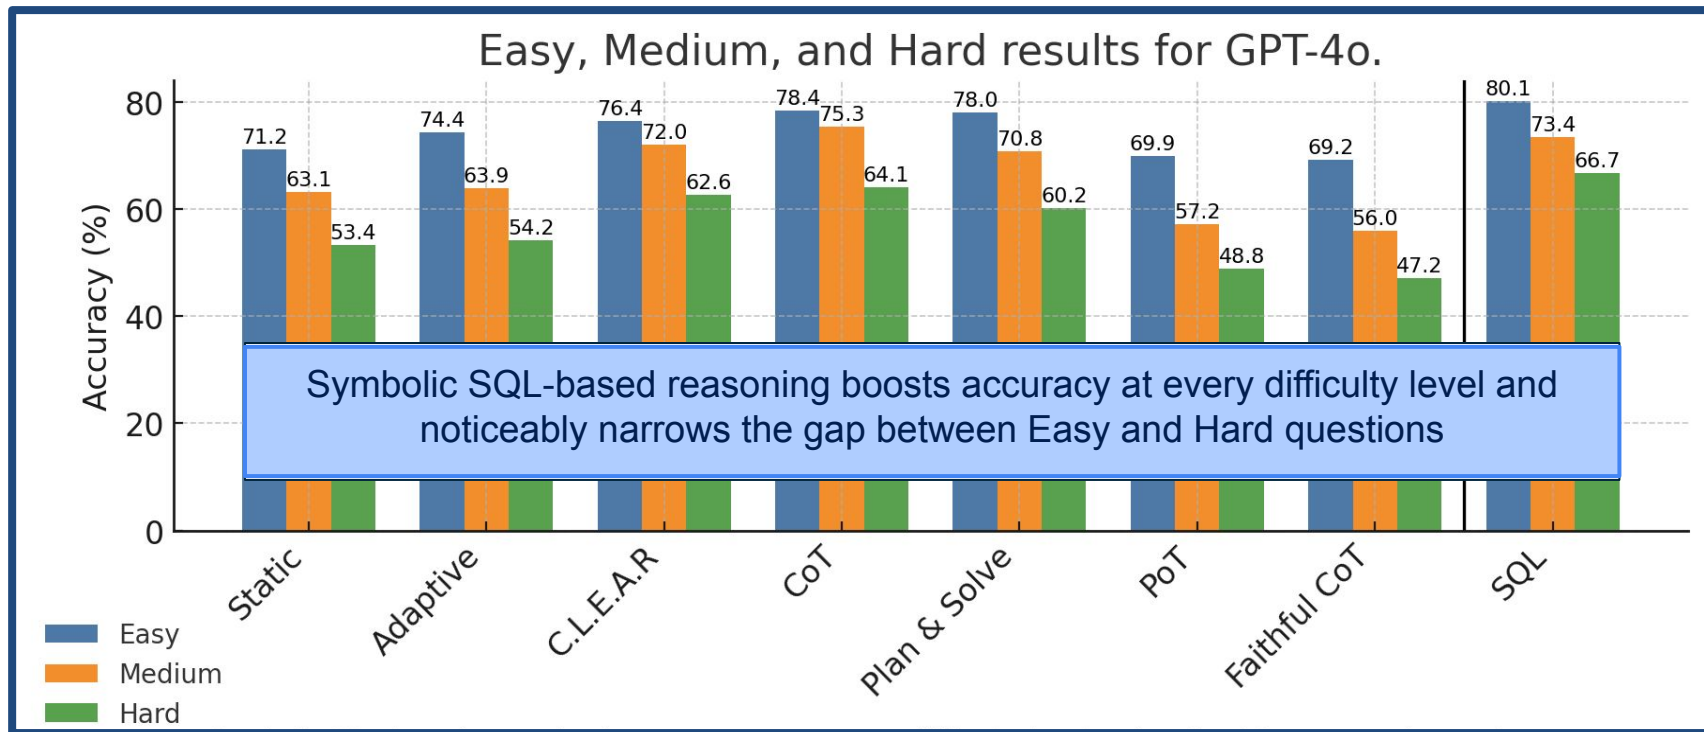

**A drop in performance as complexity increases is expected for both models and humans (though less severe for the latter), the key question is: can we do better and reduce this decline?**

A drop in performance as complexity increases is expected for both models and humans (though less severe for the latter), the key question is: can we do better and reduce this decline?

A drop in performance as complexity increases is expected for both models and humans (though less severe for the latter), the key question is: can we do better and reduce this decline?

# Contributions

**Introduced TEMPTABQA-C**, a synthetic dataset for **precise and controlled evaluation** of temporal tabular reasoning across **diverse and complex scenarios**.

**Analyzed the limitations of direct prompting**, including reliance on **memorization**, sensitivity to **table size**, and difficulty with **multi-step and counterfactual reasoning**.

**Proposed a symbolic intermediate representation**, enabling LLMs to **generate and execute SQL queries** on structured schemas, enhancing **interpretability**, reducing **biases**, and improving **generalization**.
